

SmartSense CONNECT Supported Third-Party Devices

Expand the capabilities of SmartSense with third-party devices. SmartSense is constantly looking to work with innovative companies to integrate their products within the SmartSense platform. Supported third-party devices are compatible with our SmartSense mobile app, used for collecting data and analysis within the SmartSense platform.

How It Works

SmartSense CONNECT features seamless third-party sensor integration, enabling customers to ingest data from external devices directly into the solution's ecosystem. Through standardized APIs, sensor readings from approved third-party hardware are displayed alongside native device data within the mobile app—delivering a unified, real-time monitoring experience without requiring users to toggle between multiple systems.

ThermoWorks TempTest™ Blue

Bluetooth temperature probe with auto-rotating display.

HANNA HALO2 pH Tester for Sushi

Bluetooth probe critical for HACCP compliance for shushi rice.

ThermoWorks DishTemp™ Blue

Accurately records the max surface temperature of dishware in commercial dishwashers.

ThermoWorks RayTemp™ Blue

IR Probe for close range, non-contact foodservice temperature measurements.
